

Attaching

Use your index fingers or a comb to make a U shaped part on the back of your head that spans from ear to ear. This U shaped part is known as a "Track".

Snap open each clip on one of your wefts. Wefts are the individual pieces in your Pro Extensions set that includes 100% human hair sewn onto a material backing with clips.

Now place the clips along the line below your "track" and snap shut. The grip teeth in the clip should capture your own natural hair and secure the weft to your head.

Once all of your clips are bound, make another track and add in another weft following the same procedure. Continue to add wefts until the desired style is achieved.

Generally, three to four tracks are optimal to achieve a full layered look. Most people choose to add in wefts from the top of the head (often around the top of the ear) and work their way down.

Once the back of your head is finished, you may use the single clip pieces to fill in the sides or the back as needed. Side pieces do not need to align to the tracks you made for the back of your head, but can be placed wherever you feel you need to add volume.

Long Term Care

When you are ready to remove your Pro Extensions, simply unsnap and return to the plastic bag. You do not need to wash your Pro Extensions each time you wear them. We recommend that you wash sparingly to preserve their luster and silky smooth texture.

When you wash your Pro Extensions, use a conditioning shampoo and salon strength conditioner. Use of certain shampoos and conditioners could strip the extensions of its nutrients so we recommend you test shampoos on your tester pieces before you wash your Pro Extensions.

Styling

You may use mousse, hair spray, gel or other hair products to style your Pro Extensions. You may also use a hot iron to curl your Pro Extensions. However, we recommend you always try them on the tester pieces first to ensure they will not damage your Pro Extensions.
